

# NMIST Kaggle

Cole Killian, Kusha Sareen, David Holcer

November 02 2019

## Deliverables

1. Writeup:
  - a. Each team will submit a brief writeup (approx. 1-2 pages, PDF format) summarizing their project, in which each student will describe and explain their contribution. The writeup should include the following sections:
    - i. Implementation of the model
    - ii. Results (how your model performed with various hyperparameters + your best model for the Kaggle competition)
    - iii. Challenges (what was hard about the challenge/implementation)
    - iv. Conclusion (what did you learn from this assignment)
    - v. Individual Contribution (for each student, write briefly about what you specifically did for this assignment)
2. Code:
  - a. Submit a link to the single GitHub repository for the team's project. Please add a README with steps to reproduce your results. For example, you can include a Jupyter notebook that runs from start to finish and/or instructions on how to run your script.
